Current scenario in Higher Education

- Human Civilization has come a long way in terms of education.
- Starting from the traditional "classical" system to modern day online teaching learning, we have come a long way.
- But, with the advent of World of Corona Virus (COVID-19), we are trying to improve to this millennium old education system.
- This has posed a lot to realize that, when we needed to shift the education paradigm from traditional brick and mortar to online, we are actually not ready.
- Even greater institutions in the school colleges universities in real world, everyone has struggled to some extent and huge amount of ground level research work need to be done to overcome the hurdles.
- Realizations need to be shared with proper infrastructure, has been need to be trained, contents need to be developed, collaborations need to be built and the list goes on.
